1 Introduction and functional overview

This specification describes the functionality, API and the configuration of the AUTOSAR Basic Software module Watchdog Interface.

In case of more than one watchdog device and watchdog driver (e.g. both an internal software watchdog and an external hardware watchdog) being used on an ECU, this module allows the watchdog manager (or any other client of the watchdog) to select the correct watchdog driver - and thus the watchdog device - while retaining the API and functionality of the underlying driver.

The Watchdog Interface is part of the Onboard Device Abstraction Layer (see [1]).

[SWS_Wdglf_00026] The Watchdog Interface provides uniform access to services of the underlying watchdog drivers like mode switching and setting trigger conditions (SRS_Wdg_12165, SRS_Wdg_12167, SRS_MemHwAb_14019)

2 Acronyms and abbreviations

Note: For this module there are no local acronyms and abbreviations. All used acronyms and abbreviations should be contained in the AUTOSAR glossary.

3.2 Related standards and norms

None

3.3 Related specification

AUTOSAR provides a General Specification on Basic Software modules [9] (SWS BSW General), which is also valid for Watchdog Interface.

Thus, the specification SWS BSW General shall be considered as additional and required specification for Watchdog Interface.

4 Constraints and assumptions

4.1 Limitations

No limitations.

4.2 Applicability to car domains

No restrictions.

5 Dependencies to other modules

The Watchdog Interface is part of the ECU Abstraction Layer. It allows the upper layer, especially the watchdog manager, to uniformly access one or more watchdog drivers. The implementation of the Watchdog Interface therefore depends on the number of watchdog drivers below.

5.1 File structure

5.1.1 Code file structure

For details refer to the chapter 5.1.6 "Code file structure" in SWS_BSWGeneral.

5.1.2 Version check

For details refer to the chapter 5.1.8 "Version Check" in SWS_BSWGeneral.

6 Requirements traceability

Requirement	Description	Satisfied by
SRS_BSW_00003	All software modules shall provide version and identification information	SWS_Wdglf_00999
SRS_BSW_00004	All Basic SW Modules shall perform a pre- processor check of the versions of all imported include files	SWS_Wdglf_00999
SRS_BSW_00005	Modules of the µC Abstraction Layer (MCAL) may not have hard coded horizontal interfaces	SWS_Wdglf_00999
SRS_BSW_00006	The source code of software modules above the µC Abstraction Layer (MCAL) shall not be processor and compiler dependent.	SWS_Wdglf_00999
SRS_BSW_00007	All Basic SW Modules written in C language shall conform to the MISRA C 2012 Standard.	SWS_Wdglf_00999
SRS_BSW_00009	All Basic SW Modules shall be documented according to a common standard.	SWS_Wdglf_00999
SRS_BSW_00010	The memory consumption of all Basic SW Modules shall be documented for a defined configuration for all supported platforms.	SWS_Wdglf_00999
SRS_BSW_00101	The Basic Software Module shall be able to initialize variables and hardware in a separate initialization function	SWS_Wdglf_00999
SRS_BSW_00159	All modules of the AUTOSAR Basic Software shall support a tool based configuration	SWS_Wdglf_00999
SRS_BSW_00160	Configuration files of AUTOSAR Basic SW module shall be readable for human beings	SWS_Wdglf_00999
SRS_BSW_00161	The AUTOSAR Basic Software shall provide a microcontroller abstraction layer which provides a standardized interface to higher software layers	SWS_Wdglf_00999
SRS_BSW_00162	The AUTOSAR Basic Software shall provide a hardware abstraction layer	SWS_Wdglf_00999
SRS_BSW_00164	The Implementation of interrupt service routines shall be done by the Operating System, complex drivers or modules	SWS_Wdglf_00999
SRS_BSW_00167	All AUTOSAR Basic Software Modules shall provide configuration rules and constraints to enable plausibility checks	SWS_Wdglf_00999
SRS_BSW_00168	SW components shall be tested by a function defined in a common API in the Basis-SW	SWS_Wdglf_00999
SRS_BSW_00170	The AUTOSAR SW Components shall provide information about their dependency from faults, signal qualities, driver demands	SWS_Wdglf_00999

Optional functionality of a Basic-SW component that is not required in the ECU shall be configurable at pre-compile-time	SWS_Wdglf_00999
The scheduling strategy that is built inside the Basic Software Modules shall be compatible with the strategy used in the system	SWS_Wdglf_00999
All AUTOSAR Basic Software Modules shall be identified by an unambiguous name	SWS_Wdglf_00999
All AUTOSAR Basic Software Modules shall only import the necessary information	SWS_Wdglf_00041
All AUTOSAR Basic Software Modules shall only export information needed by other modules	SWS_WdgIf_00999
All AUTOSAR Basic Software Modules shall use only AUTOSAR data types instead of native C data types	SWS_Wdglf_00013
Data types naming convention	SWS_Wdglf_00999
AUTOSAR Basic Software Modules shall be compiler and platform independent	SWS_Wdglf_00999
Global variables naming convention	SWS_Wdglf_00999
AUTOSAR Basic Software Modules shall not define global data in their header files, but in the C file	SWS_Wdglf_00999
All AUTOSAR Basic Software Modules shall indicate all global data with read-only purposes by explicitly assigning the const keyword	SWS_Wdglf_00999
API naming convention	SWS_Wdglf_00999
Shared code shall be reentrant	SWS_Wdglf_00999
All internal driver modules shall separate the interrupt frame definition from the service routine	SWS_Wdglf_00999
Each AUTOSAR Basic Software Module file shall provide version numbers in the header file	SWS_Wdglf_00999
The version numbers of AUTOSAR Basic Software Modules shall be enumerated according specific rules	SWS_WdgIf_00999
All AUTOSAR Basic Software Modules shall check passed API parameters for validity	SWS_Wdglf_00028
The runtime of interrupt service routines and functions that are running in interrupt context shall be kept short	SWS_Wdglf_00999
Error values naming convention	SWS_Wdglf_00006
All AUTOSAR Basic Software Modules shall avoid the duplication of code	SWS_Wdglf_00999
It shall be allowed to use macros instead of functions where source code is used and	SWS_Wdglf_00999
	component that is not required in the ECU shall be configurable at pre-compile-time The scheduling strategy that is built inside the Basic Software Modules shall be compatible with the strategy used in the system All AUTOSAR Basic Software Modules shall be identified by an unambiguous name All AUTOSAR Basic Software Modules shall only import the necessary information All AUTOSAR Basic Software Modules shall only export information needed by other modules All AUTOSAR Basic Software Modules shall use only AUTOSAR data types instead of native C data types Data types naming convention AUTOSAR Basic Software Modules shall be compiler and platform independent Global variables naming convention AUTOSAR Basic Software Modules shall not define global data in their header files, but in the C file All AUTOSAR Basic Software Modules shall indicate all global data with read-only purposes by explicitly assigning the const keyword API naming convention Shared code shall be reentrant All internal driver modules shall separate the interrupt frame definition from the service routine Each AUTOSAR Basic Software Module file shall provide version numbers in the header file The version numbers of AUTOSAR Basic Software Modules shall be enumerated according specific rules All AUTOSAR Basic Software Modules shall check passed API parameters for validity The runtime of interrupt service routines and functions that are running in interrupt context shall be kept short Error values naming convention All AUTOSAR Basic Software Modules shall avoid the duplication of code It shall be allowed to use macros instead of

	1	
	runtime is critical	
SRS_BSW_00331	All Basic Software Modules shall strictly separate error and status information	SWS_Wdglf_00999
SRS_BSW_00333	For each callback function it shall be specified if it is called from interrupt context or not	SWS_Wdglf_00999
SRS_BSW_00334	All Basic Software Modules shall provide an XML file that contains the meta data	SWS_Wdglf_00999
SRS_BSW_00335	Status values naming convention	SWS_Wdglf_00999
SRS_BSW_00336	Basic SW module shall be able to shutdown	SWS_Wdglf_00999
SRS_BSW_00337	Classification of development errors	SWS_Wdglf_00006
SRS_BSW_00339	Reporting of production relevant error status	SWS_Wdglf_00999
SRS_BSW_00341	Module documentation shall contains all needed informations	SWS_Wdglf_00999
SRS_BSW_00342	It shall be possible to create an AUTOSAR ECU out of modules provided as source code and modules provided as object code, even mixed	SWS_Wdglf_00999
SRS_BSW_00343	The unit of time for specification and configuration of Basic SW modules shall be preferably in physical time unit	SWS_WdgIf_00999
SRS_BSW_00344	BSW Modules shall support link-time configuration	SWS_Wdglf_00999
SRS_BSW_00345	BSW Modules shall support pre-compile configuration	SWS_Wdglf_00999
SRS_BSW_00346	All AUTOSAR Basic Software Modules shall provide at least a basic set of module files	SWS_Wdglf_00999
SRS_BSW_00347	A Naming seperation of different instances of BSW drivers shall be in place	SWS_Wdglf_00999
SRS_BSW_00348	All AUTOSAR standard types and constants shall be placed and organized in a standard type header file	SWS_Wdglf_00999
SRS_BSW_00350	All AUTOSAR Basic Software Modules shall allow the enabling/disabling of detection and reporting of development errors.	SWS_Wdglf_00028
SRS_BSW_00351	Encapsulation of compiler specific methods to map objects	SWS_Wdglf_00999
SRS_BSW_00353	All integer type definitions of target and compiler specific scope shall be placed and organized in a single type header	SWS_Wdglf_00999
SRS_BSW_00357	For success/failure of an API call a standard return type shall be defined	SWS_Wdglf_00046
SRS_BSW_00358	The return type of init() functions implemented by AUTOSAR Basic Software Modules shall be void	SWS_Wdglf_00999
SRS_BSW_00359	All AUTOSAR Basic Software Modules callback functions shall avoid return types other than void if possible	SWS_Wdglf_00999

AUTOSAR Basic Software Modules callback functions are allowed to have parameters	SWS_Wdglf_00999
All mappings of not standardized keywords of compiler specific scope shall be placed and organized in a compiler specific type and keyword header	SWS_Wdglf_00999
All AUTOSAR Basic Software Modules shall not return specific development error codes via the API	SWS_Wdglf_00999
The main processing function of each AUTOSAR Basic Software Module shall be named according the defined convention	SWS_WdgIf_00999
All Basic Software Modules shall provide a readable module vendor identification	SWS_Wdglf_00999
Basic Software Modules shall report wake- up reasons	SWS_Wdglf_00999
A Basic Software Module can return a module specific types	SWS_Wdglf_00999
AUTOSAR shall provide a boolean type	SWS_Wdglf_00999
All software modules shall provide a module identifier in the header file and in the module XML description file.	SWS_Wdglf_00999
Configuration parameters being stored in memory shall be placed into separate c-files	SWS_Wdglf_00999
The Basic Software Module specifications shall specify which other configuration files from other modules they use at least in the description	SWS_WdgIf_00999
The Basic Software Module specifications shall specify at least in the description which other modules they require	SWS_Wdglf_00047, SWS_Wdglf_00048
List possible error notifications	SWS_Wdglf_00006
The BSW shall specify the configuration for detecting an error	SWS_Wdglf_00006
Containers shall be used to group configuration parameters that are defined for the same object	SWS_Wdglf_00999
Containers shall have names	SWS_Wdglf_00999
Parameter content shall be unique within the module	SWS_Wdglf_00999
Parameters shall have a type	SWS_Wdglf_00999
Parameters shall have a range	SWS_Wdglf_00999
The Basic Software Module specifications shall specify the scope of the configuration parameters	SWS_Wdglf_00999
The Basic Software Module specifications shall list all configuration parameter dependencies	SWS_Wdglf_00999
	parameters All mappings of not standardized keywords of compiler specific scope shall be placed and organized in a compiler specific type and keyword header All AUTOSAR Basic Software Modules shall not return specific development error codes via the API The main processing function of each AUTOSAR Basic Software Module shall be named according the defined convention All Basic Software Modules shall provide a readable module vendor identification Basic Software Modules shall report wake-up reasons A Basic Software Module can return a module specific types AUTOSAR shall provide a boolean type All software modules shall provide a module identifier in the header file and in the module XML description file. Configuration parameters being stored in memory shall be placed into separate c-files The Basic Software Module specifications shall specify which other configuration files from other modules they use at least in the description The Basic Software Module specifications shall specify at least in the description which other modules they require List possible error notifications The BSW shall specify the configuration for detecting an error Containers shall be used to group configuration parameters that are defined for the same object Containers shall have names Parameter content shall be unique within the module Parameters shall have a type Parameters shall have a range The Basic Software Module specifications shall specify the scope of the configuration parameters The Basic Software Module specifications shall specify the scope of the configuration parameters

	The Basic Software Module specifications shall specify the supported configuration classes for changing values and multiplicities for each parameter/container	SWS_Wdglf_00999
	The configuration parameters in pre-compile time are fixed before compilation starts	SWS_Wdglf_00999
	The link-time configuration is achieved on object code basis in the stage after compiling and before linking	SWS_Wdglf_00999
	Parameter-sets shall be located in a separate segment and shall be loaded after the code	SWS_Wdglf_00999
	Parameter shall be selected from multiple sets of parameters after code has been loaded and started	SWS_Wdglf_00999
	Documentation of multiple instances of configuration parameters shall be available	SWS_Wdglf_00999
	Each module shall provide version information	SWS_Wdglf_00999
	The Basic Software Module specifications shall specify for each parameter/container whether it supports different values or multiplicity in different configuration sets	SWS_Wdglf_00999
	BSW Modules shall support post-build configuration	SWS_Wdglf_00999
	BSW Modules shall support multiple configuration sets	SWS_Wdglf_00999
	A static status variable denoting if a BSW module is initialized shall be initialized with value 0 before any APIs of the BSW module is called	SWS_Wdglf_00999
	Each BSW module shall provide a function to read out the version information of a dedicated module implementation	SWS_Wdglf_00999
	All AUTOSAR Basic Software Modules configuration parameters shall be named according to a specific naming rule	SWS_Wdglf_00999
	All production code error ID symbols are defined by the Dem module and shall be retrieved by the other BSW modules from Dem configuration	SWS_WdgIf_00999
SRS_BSW_00410	Compiler switches shall have defined values	SWS_Wdglf_00999
	All AUTOSAR Basic Software Modules shall apply a naming rule for enabling/disabling the existence of the API	SWS_Wdglf_00999
	An index-based accessing of the instances of BSW modules shall be done	SWS_Wdglf_00999
	Init functions shall have a pointer to a configuration structure as single parameter	SWS_Wdglf_00006
SRS_BSW_00415	Interfaces which are provided exclusively for	SWS_Wdglf_00999

one module shall be separated into a	
The sequence of modules to be initialized shall be configurable	SWS_WdgIf_00999
Software which is not part of the SW-C shall report error events only after the DEM is fully operational.	SWS_WdgIf_00999
If a pre-compile time configuration parameter is implemented as "const" it should be placed into a separate c-file	SWS_Wdglf_00999
Pre-de-bouncing of error status information is done within the DEM	SWS_Wdglf_00999
BSW modules with AUTOSAR interfaces shall be describable with the means of the SW-C Template	SWS_Wdglf_00999
BSW module main processing functions shall not be allowed to enter a wait state	SWS_Wdglf_00999
The BSW module description template shall provide means to model the defined trigger conditions of schedulable objects	SWS_Wdglf_00999
BSW Modules shall ensure data consistency of data which is shared between BSW modules	SWS_Wdglf_00999
ISR functions shall be defined and documented in the BSW module description template	SWS_Wdglf_00999
A BSW module shall state if its main processing function(s) has to be executed in a specific order or sequence	SWS_Wdglf_00999
Access to OS is restricted	SWS_Wdglf_00999
Modules should have separate main processing functions for read/receive and write/transmit data path	SWS_Wdglf_00999
Main processing functions are only allowed to be called from task bodies provided by the BSW Scheduler	SWS_Wdglf_00999
Memory mapping shall provide the possibility to define RAM segments which are not to be initialized during startup	SWS_Wdglf_00999
Configuration data shall be defined in a structure	SWS_Wdglf_00999
Enable BSW modules to handle interrupts	SWS_Wdglf_00999
The callback function invocation by the BSW module shall follow the signature provided by RTE to invoke servers via Rte_Call API	SWS_WdgIf_00999
Naming convention for type, macro and function	SWS_Wdglf_00999

SRS_Wdg_12167	The external watchdog driver shall have a semantically identical API as an internal watchdog driver	SWS_Wdglf_00017, SWS_Wdglf_00026
SRS_Wdg_13500	The watchdog driver shall provide a service to set the watchdog trigger condition	SWS_Wdglf_00044
SWS_BSW_00212	NULL pointer checking	SWS_Wdglf_00006

7 Functional specification

7.1 General behavior

[SWS_Wdglf_00003] The Watchdog Interface shall not add functionality to the watchdog drivers. Also the Watchdog Interface does not abstract from watchdog properties like toggle or window mode, timeout periods etc. that is it does not hide any features of the underlying watchdog driver and watchdog hardware.

[SRS_MemHwAb_14022, SRS_MemHwAb_14024]

7.2 Error classification

7.2.1 Development Errors

[SWS_Wdglf_00006][

Type of error	Related error code	Error value
API service called with wrong device index parameter	WDGIF_E_PARAM_DEVICE	0x01
NULL pointer checking	WDGIF_E_PARAM_POINTER	0x03

J(SRS_BSW_00337, SRS_BSW_00385, SRS_BSW_00386, SRS_BSW_00327, SRS_BSW_00414, SRS_BSW_00480, SWS_BSW_00212)

[SWS_Wdglf_00028] 「If more than one watchdog driver is configured and the development error detection is enabled for this module, the parameter <code>DeviceIndex</code> shall be checked for being an existing device within the module's services. Detected errors shall be reported to the Default Error Tracer (DET) with the error code <code>WDGIF_E_PARAM_DEVICE</code> and the called service shall not be executed. <code>J (SRS_BSW_00323, SRS_BSW_00350, SRS_SPAL_12448, SRS_MemHwAb_14023)</code>

7.2.2 Runtime Errors

There are no runtime errors.

7.2.3 Transient Faults

There are no transient faults.

7.2.4 Production Errors

There are no production errors.

7.2.5 Extended Production Errors

There are no extended production errors.

8 API specification

8.1 Imported types

In this chapter all types included from the following modules are listed:

[SWS_Wdglf_00041][

Module	Header File	Imported Type
Std	Std_Types.h	Std_ReturnType
	Std_Types.h	Std_VersionInfoType

(SRS_BSW_00301)

8.2 Type definitions

Note: The implementer of the Watchdog Interface shall not change or extend the type definitions of the Watchdog Interface for a specific watchdog device or platform.

8.2.1 Wdglf_ModeType

[SWS_Wdglf_00061][

Lono_mag.	w3_wagii_00001]		
Name	Wdglf_ModeType		
Kind	Enumeration		
	WDGIF_OFF_ MODE		In this mode, the watchdog driver is disabled (switched off).
Range	WDGIF_SLOW_ MODE	1	In this mode, the watchdog driver is set up for a long timeout period (slow triggering).
	WDGIF_FAST_ MODE		In this mode, the watchdog driver is set up for a short timeout period (fast triggering).
Description	Mode type of the Wdglf module		
Available via	Wdglf.h		

[(SRS_Wdg_12018)

[SWS_Wdglf_00016] The WdgIf_ModeType values shall be passed as parameters to the watchdog drivers mode switching function (Wdg_SetMode).] (SRS_Wdg_12018)

Note: The hardware specific settings behind these modes are given in the watchdog drivers configuration set.

8.3 Function definitions

[SWS_Wdglf_00017] The Watchdog Interface shall map the APIs specified in this chapter to the API of the underlying drivers. For functional behavior refer to the specification of the watchdog driver <code>_ (SRS_Wdg_12165, SRS_Wdg_12167, SRS_MemHwAb_14019)</code>

[SWS_Wdglf_00018] 「The Watchdog Interface shall use the parameter DeviceIndex for selection of watchdog drivers. If only one watchdog driver is configured, the parameter DeviceIndex shall be ignored. 」 (SRS_MemHwAb_14020)

[SWS_Wdglf_00013] Γ The data type for the watchdog device index shall be uint8.DeviceIndex shall provide a zero-based consecutive index. Γ (SRS_BSW_00304)

[SWS_Wdglf_00019] If only one watchdog driver is configured, the Watchdog Interface shall cause no runtime overhead when mapping the Watchdog Interface API to the API of the corresponding Watchdog Driver. (SRS_MemHwAb_14021)

[SWS_Wdglf_00020] If more than one watchdog driver is configured, the Watchdog Interface shall use efficient mechanisms to map the API calls to the appropriate watchdog driver. (SRS_MemHwAb_14021)

Implementation hint: One solution is to use tables of pointers to functions where the parameter <code>DeviceIndex</code> is used as array index, for example

```
#define WdgIf_SetMode(DeviceIndex, WdgMode) \
   SetModeFctPtr[DeviceIndex](WdgMode)
```

Note: The service IDs are related to the service IDs of the watchdog driver specification (see [5]). For that reason, they may not start with 0.

8.3.1 Wdglf_SetMode

ISWS Wdalf 000421[

<u>[</u>			
Service Name	Wdglf_SetMode		
Syntax	<pre>Std_ReturnType WdgIf_SetMode (uint8 DeviceIndex,</pre>		

	WdgIf_ModeType	WdgMode	
Service ID [hex]	0x01		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	DeviceIndex	Identifies the Watchdog Driver instance.	
Parameters (in)	WdgMode	The watchdog driver mode (see Watchdog Driver).	
Parameters (inout)	None		
Parameters (out)	None		
Return value	Std_ReturnType		
Description	Map the service Wdglf_SetMode to the service Wdg_SetMode of the corresponding Watchdog Driver.		
Available via	Wdglf.h		

J(SRS_Wdg_12018)

[SWS_Wdglf_00057] \[\text{Wdglf_SetMode} \] shall return the value which it gets from the service \(\text{Wdg} \) \[\text{SetMode} \] of the corresponding Watchdog Driver. \(\text{J(SRS_Wdg_12018)} \)

Possible content of the return value is specified by the Watchdog Driver, see [5].

8.3.2 Wdglf_SetTriggerCondition

[SWS_Wdglf_00044][

Service Name	Wdglf_SetTriggerCondition		
Syntax	<pre>void WdgIf_SetTriggerCondition (uint8 DeviceIndex, uint16 Timeout)</pre>		
Service ID [hex]	0x02		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Doromotoro (in)	DeviceIndex	Identifies the Watchdog Driver instance.	
Parameters (in)	Timeout	Timeout value (milliseconds) for setting the trigger counter.	
Parameters (inout)	None		

Parameters (out)	None
Return value	None
Description	Map the service Wdglf_SetTriggerCondition to the service Wdg_SetTrigger Condition of the corresponding Watchdog Driver.
Available via	Wdglf.h

J(SRS_Wdg_13500)

8.3.3 Wdglf_GetVersionInfo

[SWS_Wdglf_00046][

[3#3_#dgii_000+0]			
Service Name	Wdglf_GetVersionInfo		
Syntax	<pre>void WdgIf_GetVersionInfo (Std_VersionInfoType* VersionInfoPtr)</pre>		
Service ID [hex]	0x03		
Sync/Async	Synchronous		
Reentrancy	Reentrant		
Parameters (in)	None		
Parameters (inout)	None		
Parameters (out)	VersionInfo Ptr	Pointer to where to store the version information of this module.	
Return value	None		
Description	Returns the version information.		
Available via	Wdglf.h		

J(SRS_BSW_00357)

8.4 Call-back notifications

This module does not provide any callback functions.

8.5 Scheduled functions

This module does not need any scheduled functions.

8.6 Expected interfaces

In this chapter all interfaces required from other modules are listed.

8.6.1 Mandatory interfaces

This chapter defines all interfaces which are required to fulfill the core functionality of the module.

[SWS_Wdglf_00047][

API Function	Header File	Description
Wdg_SetMode	Wdg.h	Switches the watchdog into the mode Mode.
Wdg_SetTriggerCondition	Wdg.h	Sets the timeout value for the trigger counter.

(SRS_BSW_00384)

8.6.2 Optional interfaces

This chapter defines all interfaces which are required to fulfill an optional functionality of the module.

[SWS_Wdglf_00048][

API Function	Header File	Description	
Det_ReportError	Det.h	Service to report development errors.	

J(SRS_BSW_00384)

8.6.3 Configurable interfaces

There are no configurable interfaces for this module.

9 Sequence diagrams

Refer to specification of watchdog driver [5].

10 Configuration specification

In general, this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter 10.1 describes fundamentals. It also specifies a template (table) you shall use for the parameter specification. We intend to leave Chapter 10.1 in the specification to guarantee comprehension.

Chapter 10.2 specifies the structure (containers) and the parameters of the module Wdglf.

Chapter 10.3 specifies published information of the module Wdglf.

10.1 How to read this chapter

For details refer to the chapter 10.1 "Introduction to configuration specification" in SWS BSWGeneral.

10.2 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters are described in chapters 7 and 8.

Also Figure 10-1 depicts the Watchdog Interface configuration.

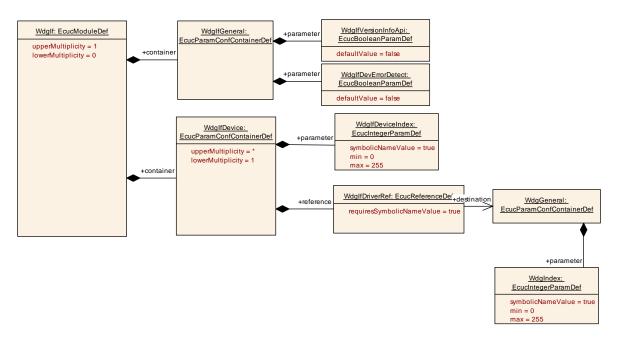

Figure 10-1 Watchdog Interface configuration

10.2.1 Wdglf

SWS Item	ECUC_Wdglf_00033:	
Module Name	Wdglf	
Module Description	Configuration of the Wdglf (Watchdog Interface) module.	
Post-Build Variant Support	false	
Supported Config Variants	VARIANT-PRE-COMPILE	

Included Containers			
Container Name	Multiplicity	Scope / Dependency	
WdglfDevice	1*	It contains the information for the selection of a particular Watchdog device in case multiple Watchdog drivers are connected.	
WdglfGeneral	· ·	This container collects all generic watchdog interface parameters.	

10.2.2 WdglfGeneral

SWS Item	ECUC_Wdglf_00001 :
Container Name	WdglfGeneral
Parent Container	Wdglf
Description	This container collects all generic watchdog interface parameters.
Configuration Parameters	

SWS Item	ECUC_Wdglf_00005:		
Name	WdglfDevErrorDetect		
Parent Container	WdglfGeneral		
Description	Switches the development error detection and notification on or off. true: detection and notification is enabled. false: detection and notification is disabled.		
Multiplicity	1		
Type	EcucBooleanParamDef		
Default value	false		
Post-Build Variant Value	false		
Value Configuration Class	Pre-compile time	Χ	All Variants
	Link time
