## 1 Introduction and functional overview

This specification specifies the functionality, API and the configuration of the AUTOSAR Basic Software module PORT Driver.

This driver specification is applicable for on-chip ports and port pins.

This module shall provide the service for initializing the whole PORT structure of the microcontroller. Many ports and port pins can be assigned to various functionalities, e.g.

- General purpose I/O
- ADC
- SPI
- SCI
- PWM
- CAN
- LIN
- etc

For this reason, there shall be an overall configuration and initialization of this port structure. The configuration and mode of these port pins is microcontroller and ECU dependent.

Port initialisation data shall be written to each port as efficiently as possible.

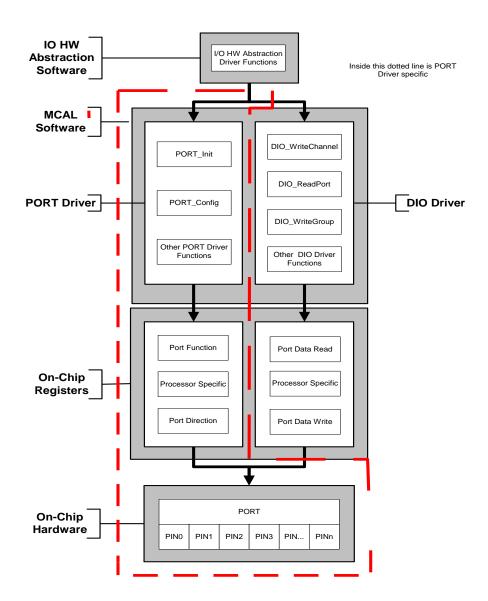

This PORT driver module shall complete the overall configuration and initialisation of the port structure which is used in the DIO driver module. Therefore, the DIO driver works on pins and ports which are configured by the PORT driver.

The PORT driver shall be initialised prior to use of the DIO functions. Otherwise DIO functions will exhibit undefined behaviour.

The diagram below identifies the PORT driver functions, and the structure of the PORT driver and DIO driver within the MCAL software layer.

Driver		Name for Subset of Adjacent pins on one port	Name for a whole port
DIO Driver	Channel	Channel Group	Port
PORT Driver	Port pin		Port

# 2 Acronyms and abbreviations

The following table summarizes the expressions used within the PORT driver.

Abbreviation / Acronym:	Description:
DEM	Diagnostic Event Manager
DET	Default Error Tracer
MCU	MicroController Unit
Port Pin	Represents a single configurable input or output pin on an MCU device.
Port	Represents a whole configurable port on an MCU device.
Physical Level (Input)	Two states are possible: LOW/HIGH
Physical Level (Output)	Two states are possible: LOW/HIGH

#### 3.2 Related standards and norms

[13] EC 7498-1 The Basic Model, IEC Norm, 1994

## 3.3 Related specification

AUTOSAR provides a General Specification on Basic Software modules [12] (SWS BSW General), which is also valid for Port Driver.

Thus, the specification SWS BSW General shall be considered as additional and required specification for Port Driver.

# 4 Constraints and assumptions

#### 4.1 Limitations

Limitations for the PORT driver are specified as followed:

 It is the user's responsibility to ensure that the same Port/Port pin is not being accessed in parallel by different entities in the same system, e.g. by two tasks configuring the same port or two tasks configuring the same pin, or two tasks configuring different pins on the same port.

# 4.2 Applicability to car domains

No restrictions

# 5 Dependencies to other modules

Other driver modules may be dependent on the PORT driver depending on the available functionality of individual port pins on an MCU. For example, an MCU pin may be configurable as a DIO or SPI pin. Therefore, the DIO and/or the SPI driver modules may be dependent on the PORT module to configure the pin for the desired functionality.

#### 5.1 File structure

#### 5.1.1 Code file structure

For details refer to the chapter 5.1.6 "Code file structure" in SWS\_BSWGeneral.

# 6 Requirements traceability

This chapter refers to the input requirements specified in the SRS documents (Software Requirements Specifications) that are applicable for this software module.

The table below lists the specification items of the PORT driver SWS document that satisfy the input requirements. Only functional requirements are referenced.

Requirement	Description	Satisfied by
SRS_BSW_00005	Modules of the µC Abstraction Layer (MCAL) may not have hard coded horizontal interfaces	SWS_Port_00227
SRS_BSW_00006	The source code of software modules above the µC Abstraction Layer (MCAL) shall not be processor and compiler dependent.	SWS_Port_00227
SRS_BSW_00007	All Basic SW Modules written in C language shall conform to the MISRA C 2012 Standard.	SWS_Port_00227
SRS_BSW_00010	The memory consumption of all Basic SW Modules shall be documented for a defined configuration for all supported platforms.	SWS_Port_00227
SRS_BSW_00101	The Basic Software Module shall be able to initialize variables and hardware in a separate initialization function	SWS_Port_00001, SWS_Port_00002, SWS_Port_00041, SWS_Port_00042
SRS_BSW_00159	All modules of the AUTOSAR Basic Software shall support a tool based configuration	SWS_Port_00004
SRS_BSW_00160	Configuration files of AUTOSAR Basic SW module shall be readable for human beings	SWS_Port_00227
SRS_BSW_00161	The AUTOSAR Basic Software shall provide a microcontroller abstraction layer which provides a standardized interface to higher software layers	SWS_Port_00227
SRS_BSW_00162	The AUTOSAR Basic Software shall provide a hardware abstraction layer	SWS_Port_00227
SRS_BSW_00164	The Implementation of interrupt service routines shall be done by the Operating System, complex drivers or modules	SWS_Port_00227
SRS_BSW_00167	All AUTOSAR Basic Software Modules shall provide configuration rules and constraints	SWS_Port_00227

	to enable plausibility checks	
SRS_BSW_00168	SW components shall be tested by a function defined in a common API in the Basis-SW	SWS_Port_00227
SRS_BSW_00170	The AUTOSAR SW Components shall provide information about their dependency from faults, signal qualities, driver demands	SWS_Port_00227
SRS_BSW_00172	The scheduling strategy that is built inside the Basic Software Modules shall be compatible with the strategy used in the system	SWS_Port_00227
SRS_BSW_00307	Global variables naming convention	SWS_Port_00227
SRS_BSW_00308	AUTOSAR Basic Software Modules shall not define global data in their header files, but in the C file	SWS_Port_00227
SRS_BSW_00309	All AUTOSAR Basic Software Modules shall indicate all global data with read-only purposes by explicitly assigning the const keyword	SWS_Port_00227
SRS_BSW_00321	The version numbers of AUTOSAR Basic Software Modules shall be enumerated according specific rules	SWS_Port_00227
SRS_BSW_00323	All AUTOSAR Basic Software Modules shall check passed API parameters for validity	SWS_Port_00087
SRS_BSW_00325	The runtime of interrupt service routines and functions that are running in interrupt context shall be kept short	SWS_Port_00227
SRS_BSW_00327	Error values naming convention	SWS_Port_00051
SRS_BSW_00328	All AUTOSAR Basic Software Modules shall avoid the duplication of code	SWS_Port_00227
SRS_BSW_00330	It shall be allowed to use macros instead of functions where source code is used and runtime is critical	SWS_Port_00227
SRS_BSW_00331	All Basic Software Modules shall strictly separate error and status information	SWS_Port_00227
SRS_BSW_00333	For each callback function it shall be specified if it is called from interrupt context or not	SWS_Port_00227
SRS_BSW_00334	All Basic Software Modules shall provide an XML file that contains the meta data	SWS_Port_00227
SRS_BSW_00335	Status values naming convention	SWS_Port_00227
SRS_BSW_00336	Basic SW module shall be able to shutdown	SWS_Port_00227
SRS_BSW_00337	Classification of development errors	SWS_Port_00051
SRS_BSW_00341	Module documentation shall contains all needed informations	SWS_Port_00227
SRS_BSW_00342	It shall be possible to create an AUTOSAR ECU out of modules provided as source code and modules provided as object code, even mixed	SWS_Port_00227

configuration  CRS_BSW_00347 A Naming seperation of different instances of BSW drivers shall be in place  SRS_BSW_00357 For success/failure of an API call a standard return type shall be defined  SRS_BSW_00358 The return type of init() functions implemented by AUTOSAR Basic Software Modules shall be void  SRS_BSW_00359 All AUTOSAR Basic Software Modules callback functions shall avoid return types other than void if possible  SRS_BSW_00360 AUTOSAR Basic Software Modules callback functions are allowed to have parameters  SRS_BSW_00371 - SWS_Port_00227  SRS_BSW_00373 AB Software Module shall be named according the defined convention  SRS_BSW_00375 AB Software Modules shall report wake-up reasons  SRS_BSW_00376 AUTOSAR Basic Software Modules an return a module specific types  SRS_BSW_00378 AUTOSAR shall provide a boolean type  SRS_BSW_00378 The Ink-time configuration parameter dependencies  SRS_BSW_00385 The Ink-time configuration is achieved on object code basis in the stage after compiling and before linking  SRS_BSW_00404 BSW Modules shall support post-build configuration  SRS_BSW_00404 A static status variable denoting if a BSW Module is initialized with value 0 before any APIs of the BSW module  SRS_BSW_00410 An index-based accessing of the instances of BSW module is called  SRS_BSW_00411 An index-based accessing of the instances of BSW modules shall be onlited to a configuration structure as single parameter  SRS_BSW_00416 The sequence of modules to be initialized shall be configuration structure as single parameter.  SRS_BSW_00416 The sequence of modules to be initialized shall be configuration and the provider and the politer for a configuration and the provider and the provider and the provider and s			
configuration  CRS_BSW_00347 A Naming seperation of different instances of BSW drivers shall be in place  SRS_BSW_00357 For success/failure of an API call a standard return type shall be defined  SRS_BSW_00358 The return type of init() functions implemented by AUTOSAR Basic Software Modules shall be void  SRS_BSW_00359 All AUTOSAR Basic Software Modules shall be void subset of tructions are allowed to have parameters  SRS_BSW_00360 AUTOSAR Basic Software Modules callback functions shall avoid return types other than void if possible  SRS_BSW_00370 - SWS_Port_00227  SRS_BSW_00371 - SWS_Port_00227  SRS_BSW_00373 AB Basic Software Module shall be named according the defined convention  SRS_BSW_00376 Basic Software Module shall be named according the defined convention  SRS_BSW_00378 AUTOSAR shall provide a boolean type  SRS_BSW_00378 List possible error notifications shall ist all configuration parameter dependencies  SRS_BSW_00395 The Basic Software Module specifications shall ist all configuration parameter dependencies  SRS_BSW_00404 BSW Modules shall support post-build configuration  SRS_BSW_00404 BSW Modules shall be initialized with value 0 before any APIs of the BSW module  scalled  SRS_BSW_00413 An index-based accessing of the instances of BSW modules shall be done  SRS_BSW_00414 Init functions shall have a pointer to a configuration structure as single parameter  SRS_BSW_00416 The sequence of modules to be initialized shall be configuration structure as single parameter  SRS_BSW_00417 Software which is not part of the SW-C shall report error events only after the DEM is fully operational.	SRS_BSW_00343	configuration of Basic SW modules shall be	SWS_Port_00227
of BSW_drivers shall be in place  SRS_BSW_00357 For success/failure of an API call a standard return type shall be defined  SRS_BSW_00358 The return type of init() functions implemented by AUTOSAR Basic Software Modules shall be void  SRS_BSW_00359 All AUTOSAR Basic Software Modules callback functions shall avoid return types other than void if possible  SRS_BSW_00360 AUTOSAR Basic Software Modules callback functions are allowed to have parameters  SRS_BSW_00371 - SWS_Port_00227  SRS_BSW_00371 - SWS_Port_00227  SRS_BSW_00373 For main processing function of each AUTOSAR Basic Software Module shall be named according the defined convention  SRS_BSW_00375 Basic Software Module shall be named according the defined convention  SRS_BSW_00375 AB Basic Software Module shall report wake-up reasons  SRS_BSW_00376 AB Basic Software Module can return a module specific types  SRS_BSW_00378 AUTOSAR shall provide a boolean type SWS_Port_00227  SRS_BSW_00385 List possible error notifications  SRS_BSW_00385 List possible error notifications  SRS_BSW_00386 The Basic Software Module specifications  SRS_BSW_00398 The link-time configuration parameter dependencies  SRS_BSW_00404 BSW Modules shall support post-build configuration  SRS_BSW_00404 A static status variable denoting if a BSW module is initialized shall be initialized with value 0 before any APIs of the BSW module  SRS_BSW_00413 An index-based accessing of the instances of BSW modules shall be done  SRS_BSW_00416 The sequence of modules to be initialized shall be configuration and configuration and perfore the study of the SWS_Port_00227 shall be configuration as for the SW-C shall report error events only after the DEM is fully operational. # 7 Functional specification

#### 7.1 General Behaviour

#### 7.1.1 Background & Rationale

**[SWS\_Port\_00001]** [The PORT Driver module shall initialize the whole port structure of the microcontroller. ] (SRS\_BSW\_00101)

Note: Defining the order in which the ports and port pins are configured is the task of the configuration tool.

#### 7.1.2 Requirements

#### 7.1.2.1 Configuration of Port Pin Properties

**[SWS\_Port\_00004]** [The PORT Driver module shall allow the configuration of different functionality for each port and port pin, e.g. ADC, SPI, DIO etc. ] (SRS\_BSW\_00159, SRS\_Port\_12001)

The configuration of the port (i.e. whole port or single port pin) is microcontroller dependent.

**[SWS\_Port\_00079]** [The PORT Driver module shall provide additional configurations for the MCU port/port pins:

- Pin direction (input/output)
- Pin level initial value
- Pin direction changeable during runtime (yes/no).
- Port mode changeable during runtime. | (SRS Port 12001)

**[SWS\_Port\_00081]** [The PORT Driver module shall provide a number of optional configurations for the MCU ports and port pins (if supported by hardware):

- Slew rate control
- Activation of internal pull-ups
- Input Thresholds
- Pin driven mode (push-pull / open drain).
- Type of Readback support (pin level, output register value). ] ()

**[SWS\_Port\_00082]** [The PORT Driver module shall not provide the facility to configure pin level inversion. The default value shall be set (i.e. not inverted). | ()

Note: The IO Hardware Abstraction layer shall carry out level inversion.

#### 7.1.2.2 Switch port pin direction

**[SWS\_Port\_00137]** [For the port pins configured as changeable using the configuration tool, the PORT driver shall allow the user to change the direction of port pins during runtime. ] ()

**[SWS\_Port\_00138]** [If the MCU port control hardware provides an output latch for setting the output level on a port pin, switching the port pin direction shall not alter the level set in this output latch. ] (SRS\_Port\_12405)

#### 7.1.2.3 Refresh port direction

**[SWS\_Port\_00066]** For refreshing of the port on the microcontroller, the PORT driver shall allow the user to refresh the direction of those port pins whose direction is set by configuration and cannot be changed dynamically. | ( )

## 7.1.2.4 Configuration of unused Ports and Port Pins

**[SWS\_Port\_00005]** [The PORT Driver module shall configure all ports and port pins that are not used (neither as GPIO nor special purpose IO) to be set to a defined state by the PORT Driver module configuration. ] (SRS\_Port\_12300)

#### 7.1.2.5 Configuration of symbolic names

**[SWS\_Port\_00006]** [The user of the PORT Driver module shall configure the symbolic names of the port pins of the MCU. ] (SRS\_Port\_12302)

**[SWS\_Port\_00207]** [These symbolic names for the individual port pins (e.g. PORT\_A\_PIN\_0) shall be defined in the configuration tool. ] ( )

[SWS\_Port\_00208] [The PORT Driver module's implementer shall publish the symbolic names through the file Port.h] ()

#### 7.1.2.6 Atomicity of port access

**[SWS\_Port\_00075]** [The PORT Driver module shall provide atomic access to all ports and port pins. ] ()

#### Note:

An atomic access is a non interruptible access to Microcontroller registers by the use of either atomic instructions or the usage of an exclusive area (interrupt disabling for example) provided by the basic software scheduler module.

#### 7.1.3 Version Check

## 7.1.3.1 Background and Rationale

The integration of incompatible files shall be avoided. Minimum implementation is the version check of the header file inside the .c file (version numbers of .c and .h files shall be identical).

#### 7.1.3.2 Requirements

The Port module shall avoid the integration of incompatible files by the following pre-processor checks:

For details refer to the chapter 5.1.8 "Version Check" in SWS\_BSWGeneral.

#### 7.2 Error classification

## [SWS\_Port\_00051][

Type of error	Related error code	Error value
Invalid Port Pin ID requested	PORT_E_PARAM_PIN	0x0A
Port Pin not configured as changeable	PORT_E_DIRECTION_ UNCHANGEABLE	0x0B
API Port_Init service called with wrong parameter	PORT_E_INIT_FAILED	0x0C
API Port_SetPinMode service called when mode is unchangeable.	PORT_E_PARAM_INVALID_ MODE	0x0D
API Port_SetPinMode service called when mode is unchangeable.	PORT_E_MODE_ UNCHANGEABLE	0x0E
API service called without module initialization	PORT_E_UNINIT	0x0F
APIs called with a Null Pointer	PORT_E_PARAM_POINTER	0x10

[(SRS\_BSW\_00327, SRS\_BSW\_00337, SRS\_BSW\_00385, SRS\_BSW\_00406)

## 7.2.1 Runtime Errors

There are no runtime errors.

#### 7.2.2 Transient Faults

There are no transcient faults.

#### 7.2.3 Production Errors

There are no production errors.

#### 7.2.4 Extended Production Errors

There are no extended production errors.

## 7.3 API Parameter checking

**[SWS\_Port\_00077]** [If development error detection is enabled the Port Driver module shall check the function parameters in the order in which they are passed and skip further parameter checking if one check fails.

Example: For the function Port\_SetPinDirection, the first parameter to be passed is the pin ID. This parameter shall identify the relevant port pin of the MCU's port. The second parameter passed corresponds to the direction to change on the port pin. ] (SRS\_SPAL\_12448)

**[SWS\_Port\_00087]** [If development error detection is enabled and the Port Driver module has detected an error, the desired functionality shall be skipped and the requested service shall return without any action. ] (SRS\_BSW\_00323, SRS\_BSW\_00406)

See table below for a list of the Det errors reported by each function.

Function	Error Condition	Related error value
Port_SetPinDirection	Incorrect Port Pin ID passed	PORT_E_PARAM_PIN
	ib passed	
	Port Pin not	PORT_E_DIRECTION_UNCHANGEABLE
	configured as	
	changeable	
Port_Init	Port_Init service	PORT_E_INIT_FAILED
	called with wrong	
	parameter.	
Port_SetPinMode	Incorrect Port Pin	PORT_E_PARAM_PIN
	ID passed	
	Port Pin Mode	PORT_E_PARAM_INVALID_MODE
	passed not valid	
	Port_SetPinMode	PORT_E_MODE_UNCHANGEABLE
	service called	
	when the mode is	
	unchangeable	

Port_SetPinDirection,	API service	PORT_E_UNINIT
Port_SetPinMode	called prior to	
Port_RefreshPortDirection	module	
	initialization	
Port_GetVersionInfo	Api called with a	PORT_E_PARAM_POINTER
	NULL Pointer	
	Parameter	

# 8 API specification

# 8.1 Imported types

In this chapter, all types included from the following modules are listed:

[SWS\_Port\_00129][

Module	Header File	Imported Type
Std	Std_Types.h	Std_ReturnType
	Std_Types.h	Std_VersionInfoType

]()

# 8.2 Type definitions

## 8.2.1 Port\_ConfigType

[SWS\_Port\_00228][

Name	Port_Config	Port_ConfigType				
Kind	Structure					
	Hardware D	Dependent Structure				
Elements	Туре	Type				
	<b>Comment</b> The contents of the initialization data structure are specific to the microcontroller.					
Description	Type of the external data structure containing the initialization data for this module.					
Available via	Port.h					

]()

## 8.2.2 Port\_PinType

[SWS\_Port\_00229][

Name	Port_PinType		
Kind	Туре		
Derived from	uint		
Range	0 - <number of="" pins:="" port="">  Shall cover all available port pins. The type should be chosen for the specific MCU platform (best performance).</number>		
Description	Data type for the symbolic name of a port pin.		
Available via	Port.h		

]()

[SWS\_Port\_00013] [The type Port\_PinType shall be used for the symbolic name of a Port Pin. ] ()

[SWS\_Port\_00219] [The type Port\_PinType shall be uint8, uint16 or uint32 based on the specific MCU platform. ] ( )

Note: The user shall use the symbolic names provided by the configuration tool.

#### 8.2.3 Port\_PinDirectionType

[SWS\_Port\_00230][

[0000=00]	1				
Name	Port_PinDirectionType				
Kind	Enumeration				
Range	PORT_PIN_IN 0x00 Sets port pin as input.				
	PORT_PIN_OUT 0x01 Sets port pin as output.				
Description	Possible directions of a port pin.				
Available via	Port.h				

I()

[SWS\_Port\_00046] [The type Port\_PinDirectionType is a type for defining the direction of a Port Pin. ] ()

[SWS\_Port\_00220] [The type Port\_PinDirectionType shall be of enumeration type having range as PORT\_PIN\_IN and PORT\_PIN\_OUT. ] ()

## 8.2.4 Port\_PinModeType

[SWS\_Port\_00231][

<u> </u>	ort_00201]			
Name	Port_PinModeType	Port_PinModeType		
Kind	Туре			
Derived from	uint			
Range	Implementation specific - As several port pin modes shall be configurable on one pin, the range shall be determined by the implementation.			
Description	Different port pin modes.			
Available via	Port.h			

()

[SWS\_Port\_00124] [A port pin shall be configurable with a number of port pin modes (type Port PinModeType). ] ()

[SWS\_Port\_00212] [The type Port\_PinModeType shall be used with the function call Port SetPinMode (see Section 8.3.5). ] ()

[SWS\_Port\_00221] [The type Port\_PinModeType shall be uint8, uint16 or uint32.

]()

## 8.3 Function definitions

This is a list of functions provided for upper layer modules.

#### 8.3.1 Port\_Init

[SWS\_Port\_00140][

Service Name	Port_Init		
Syntax	<pre>void Port_Init (   const Port_ConfigType* ConfigPtr )</pre>		
Service ID [hex]	0x00		
Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	ConfigPtr Pointer to configuration set.		
Parameters (inout)	None		
Parameters (out)	None		

Return value	None		
Description	Initializes the Port Driver module.		
Available via	Port.h		

[SRS\_BSW\_00358] [SWS\_Port\_00041] [The function Port\_Init shall initialize ALL ports and port pins with the configuration set pointed to by the parameter ConfigPtr.] (SRS\_BSW\_00101, SRS\_BSW\_00404, SRS\_SPAL\_12263, SRS\_SPAL\_12057, SRS\_SPAL\_12125)

[SWS\_Port\_00078] [The Port Driver module's environment shall call the function Port Init first in order to initialize the port for use. ] ()

[SWS\_Port\_00213] [If Port\_Init function is not called first, then no operation can occur on the MCU ports and port pins. | ()

[SWS\_Port\_00042] [The function Port\_Init shall initialize all configured resources. ] (SRS\_BSW\_00101, SRS\_SPAL\_12057, SRS\_SPAL\_12125)

The function Port\_Init shall apply the following rules regarding initialisation of controller registers.

- [SWS\_Port\_00113] [If the hardware allows for only one usage of the register, the driver module implementing that functionality is responsible for initializing the register. ] (SRS\_SPAL\_12461)
- [SWS\_Port\_00214] [If the register can affect several hardware modules and if it is an I/O register it shall be initialised by this PORT driver. ] (SRS\_SPAL\_12461)
- [SWS\_Port\_00215] [If the register can affect several hardware modules and if it is not an I/O register, it shall be initialised by the MCU driver. ] (SRS\_SPAL\_12461)
- [SWS\_Port\_00217] [One-time writable registers that require initialisation directly after reset shall be initialised by the startup code. ] (SRS\_SPAL\_12461)
- [SWS\_Port\_00218] [All the other registers not mentioned before, shall be initialised by the start-up code. ] (SRS\_SPAL\_12461)

[SWS\_Port\_00043] [The function Port\_Init shall avoid glitches and spikes on the affected port pins. ] (SRS\_SPAL\_12057)

[SWS\_Port\_00071] [The Port Driver module's environment shall call the function Port\_Init after a reset in order to reconfigure the ports and port pins of the MCU.

[SWS\_Port\_00002] [The function Port\_Init shall initialize all variables used by the PORT driver module to an initial state. ] (SRS\_BSW\_00101)

[SWS\_Port\_00003] [The Port Driver module's environment may also uses the function Port\_Init to initialize the driver software and reinitialize the ports and port pins to another configured state depending on the configuration set passed to this function. ] (SRS\_SPAL\_12163)

Note: In some cases, MCU port control hardware provides an output latch for setting the output level on a port pin that may be used as a DIO port pin.

[SWS\_Port\_00055] [The function Port\_Init shall set the port pin output latch to a default level (defined during configuration) before setting the port pin direction to output. ] ()

Requirement SWS\_Port\_00055 ensures that the default level is immediately output on the port pin when it is set to an output port pin.

Example: On some MCU's, after a power-on-reset, a DIO configurable port pin will be configured as an input pin. If the required configuration of the port pin is an output pin, then the function Port\_Init shall ensure that the default level is set before switching the functionality of the port pin from input to output.

[SWS\_Port\_00121] [The function Port\_Init shall always have a pointer as a parameter, even though for the configuration variant VARIANT-PRE-COMPILE, no configuration set shall be given. In this case, the Port Driver module's environment shall pass a NULL pointer to the function Port Init.] (SRS\_BSW\_00414)

The Port Driver module's environment shall not call the function Port\_Init during a running operation. This shall only apply if there is more than one caller of the PORT module.

Configuration of Port\_Init: All port pins and their functions, and alternate functions shall be configured by the configuration tool.

#### 8.3.2 Port SetPinDirection

[SWS\_Port\_00141][

Service Name	Port_SetPinDirection		
Syntax	<pre>void Port_SetPinDirection (    Port_PinType Pin,    Port_PinDirectionType Direction )</pre>		
Service ID [hex]	0x01		
Sync/Async	Synchronous		
Reentrancy	Reentrant		
Paramotors (in)	Pin	Port Pin ID number	
Parameters (in)	Direction	Port Pin Direction	
Parameters (inout)	None		
Parameters (out)	None		
Return value	None		
Description	Sets the port pin direction		
Available via	Port.h		

J() [SWS\_Port\_00063] [The function Port\_SetPinDirection shall set the port
pin direction during runtime. ] (SRS\_Port\_12405)

[SWS\_Port\_00054] [The function Port\_SetPinDirection shall be re-entrant if accessing different pins independent of a port. ] ( )

[SWS\_Port\_00086] [The function Port\_SetPinDirection shall only be available to the user if the pre-compile parameter PortSetPinDirectionApi is set to TRUE. If set to FALSE, the function Port\_SetPinDirection is not available. (see also section 8.3.2. ] (SRS\_Port\_12405)

Configuration of Port\_SetPinDirection: All ports and port pins shall be configured by the configuration tool. See <u>PORT117</u>.

#### 8.3.3 Port RefreshPortDirection

[SWS\_Port\_00142][

Service Name	Port_RefreshPortDirection	
Syntax	<pre>void Port_RefreshPortDirection (   void )</pre>	
Service ID [hex]	0x02	

Sync/Async	Synchronous		
Reentrancy	Non Reentrant		
Parameters (in)	None		
Parameters (inout)	None		
Parameters (out)	None		
Return value	None		
Description	Refreshes port direction.		
Available via	Port.h		

J() [SWS\_Port\_00060] [The function Port\_RefreshPortDirection shall refresh the direction of all configured ports to the configured direction (PortPinDirection). ] (SRS\_Port\_12406)

[SWS\_Port\_00061] [The function Port\_RefreshPortDirection shall exclude those port pins from refreshing that are configured as 'pin direction changeable during runtime'.] (SRS\_Port\_12406)

The configuration tool shall provide names for each configured port pin.

## 8.3.4 Port\_GetVersionInfo

[SWS\_Port\_00143][

Service Name	Port_GetVersionInfo		
Syntax	<pre>void Port_GetVersionInfo (    Std_VersionInfoType* versioninfo )</pre>		
Service ID [hex]	0x03		
Sync/Async	Synchronous		
Reentrancy	Reentrant		
Parameters (in)	None		
Parameters (inout)	None		
Parameters (out)	versioninfo Pointer to where to store the version information of this module.		
Return value	None		
Description	Returns the version information of this module.		
Available via	Port.h		

[SWS\_Port\_00225] [if Det is enabled, the parameter <code>versioninfo</code> shall be checked for being NULL. The error PORT\_E\_PARAM\_POINTER shall be reported in case the value is a NULL pointer. ] ()

#### 8.3.5 Port\_SetPinMode

[SWS Port 00145][

[3W3_F0IT_00145]				
Service Name	Port_SetPinMode			
Syntax	<pre>void Port_SetPinMode (   Port_PinType Pin,   Port_PinModeType Mode )</pre>			
Service ID [hex]	0x04	0x04		
Sync/Async	Synchronous			
Reentrancy	Reentrant			
Parameters (in)	Pin	Port Pin ID number		
raiameters (m)	Mode New Port Pin mode to be set on port pin.			
Parameters (inout)	None			
Parameters (out)	None			
Return value	None			
Description	Sets the port pin mode.			
Available via	Port.h			

|()|

[SWS\_Port\_00125] [The function Port\_SetPinMode shall set the port pin mode of the referenced pin during runtime. ] ()

[SWS\_Port\_00128] [The function Port\_SetPinMode shall be re-entrant if accessing different pins, independent of a port. ] ()

[SWS\_Port\_00223] [If Det is enabled, the function Port\_SetPinMode shall report PORT\_E\_MODE\_UNCHANGEABLE error and return without any other action, if the parameter PortPinModeChangeable is set to FALSE. ] ()

Configuration of Port\_SetPinMode: All ports and port pins shall be configured by the configuration tool. See <u>PORT117</u>.

## 8.4 Call-back notifications

There are no callback notifications from the PORT driver. The callback notifications are implemented in another module (ICU Driver and/or complex drivers).

## 8.5 Scheduled functions

There are no scheduled functions within the PORT Driver.

## 8.6 Expected Interfaces

In this chapter, all interfaces required from other modules are listed.

## 8.6.1 Mandatory Interfaces

None

#### 8.6.2 Optional Interfaces

This chapter defines all interfaces which are required to fulfill an optional functionality of the module.

[SWS\_Port\_00146][

API Function	Header File	Description	
Det_ReportError	Det.h	Service to report development errors.	

]()

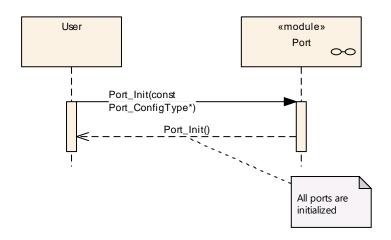

## 8.6.3 Configurable Interfaces

None

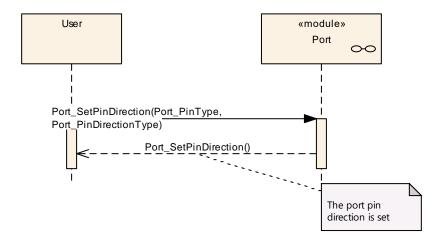

# 9 Sequence diagrams

# 9.1 Overall Configuration of Ports

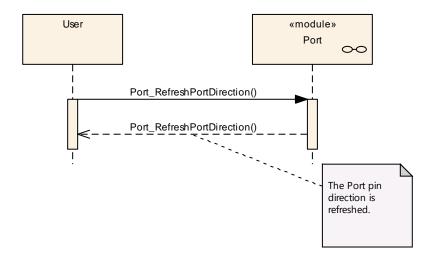

## 9.2 Set the direction of a Port Pin

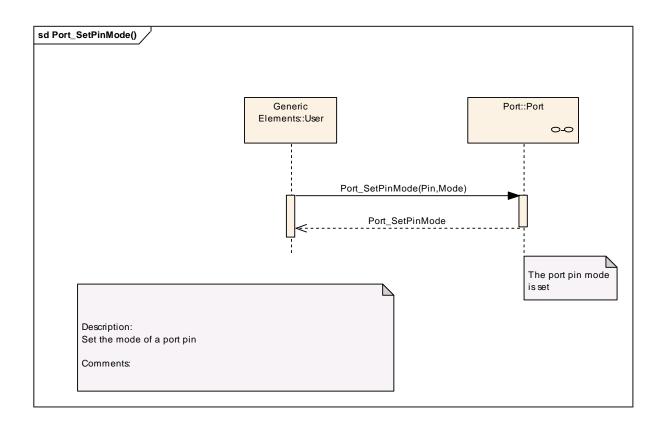

## 9.3 Refresh the direction of all Port Pins

# 9.4 Change the mode of a Port Pin

# 10 Configuration specification

In general, this chapter defines configuration parameters and their clustering into containers. In order to support the specification Chapter 10.1 describes fundamentals. It also specifies a template (table) you shall use for the parameter specification. We intend to leave Chapter 10.1 in the specification to guarantee comprehension.

Chapter <u>10.2</u> specifies the structure (containers) and the parameters of the module PORT

Chapter 10.3 specifies published information of the module PORT.

## 10.1 How to read this chapter

For details refer to the chapter 10.1 "Introduction to configuration specification" in SWS\_BSWGeneral.

## 10.2 Containers and configuration parameters

The following chapters summarize all configuration parameters. The detailed meanings of the parameters describe Chapters 7 and Chapter 8. [SWS\_Port\_00232]

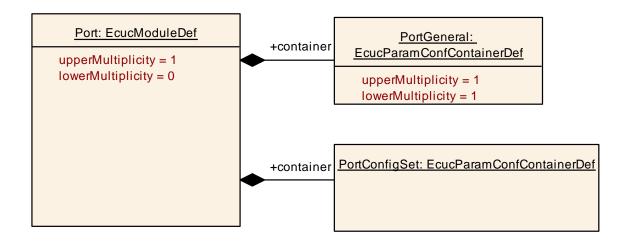

The PORT module shall reject configurations with partition mappings which are not supported by the implementation.

#### 10.2.1 Port

SWS Item	ECUC_Port_00135 :
Module Name	Port
Module Description	Configuration of the Port module.
Post-Build Variant Support	true
Supported Config Variants	VARIANT-POST-BUILD, VARIANT-PRE-COMPILE

Included Containers			
Container Name	Multiplicity	Scope / Dependency	
PortConfigSet	1	This container contains the configuration parameters and sub containers of the AUTOSAR Port module.	
PortGeneral	· ·	Module wide configuration parameters of the PORT driver.	

**Figure 1 Port Configuration Overview** 

#### 10.2.2 PortContainer

SWS Item	ECUC_Port_00122 :
Container Name	PortContainer
Parent Container	PortConfigSet
Description	Container collecting the PortPins.
Configuration Parameters	

SWS Item	ECUC_Port_00124 :				
Name	PortNumberOfPortPins				
Parent Container	PortContainer				
Description	The number of specified	The number of specified PortPins in this PortContainer.			
Multiplicity	1	1			
Туре	EcucIntegerParamDef				
Range	1 65535				
Default value					
Post-Build Variant Value	false				
Value Configuration Class	Pre-compile time	Χ	All Variants		
	Link time				
	Post-build time				
Scope / Dependency	scope: local	•			

Included Containers		
Container Name	Multiplicity	Scope / Dependency
PortPin	1*	Configuration of the individual port pins.

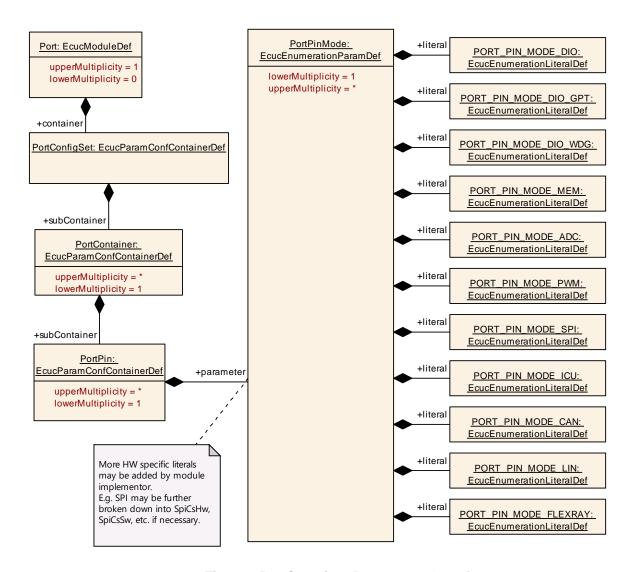

Figure 2 PortContainer Parameters Overview

#### 10.2.3 PortGeneral

SWS Item	ECUC_Port_00117 :
Container Name	PortGeneral
Parent Container	Port
Description	Module wide configuration parameters of the PORT driver.
Configuration Parameter	rs

SWS Item	ECUC_Port_00123 :		
Name	PortDevErrorDetect		
Parent Container	PortGeneral		
	Switches the development error detection and notification on or off.  • true: detection and notification is enabled.		

	false: detection and notification is disabled.			
Multiplicity	1			
Type	EcucBooleanParamDef			
Default value	false			
Post-Build Variant Value	false			
Value Configuration Class	Pre-compile time X All Variants			
	Link time			
	Post-build time	I		
Scope / Dependency	scope: local			

SWS Item	ECUC_Port_00131 :			
Name	PortSetPinDirectionApi			
Parent Container	PortGeneral			
Description	Pre-processor switch to enable / disable the use of the			
	function Port_SetPinDire	ectio	n().	
	TRUE: Enabled - Functi	ion P	ort_SetPinDirection() is available.	
	FALSE: Disabled - Fund	FALSE: Disabled - Function Port_SetPinDirection() is not		
	available.			
Multiplicity	1			
Туре	EcucBooleanParamDef

## No Included Containers

**Figure 4 PortPin Parameters Overview** 

#### 10.3 Constraints

[SWS\_Port\_CONSTR\_00233] The ECUC partitions referenced by PortPinEcucPartitionRef shall be a subset of the ECUC partitions referenced by PortEcucPartitionRef.

[SWS\_Port\_CONSTR\_00234] If PortEcucPartitionRef references one or more ECUC partitions, PortPinEcucPartitionRef shall have a multiplicity of greater than zero and reference one or several of these ECUC partitions as well.

#### 10.4 Published Information

For details refer to the chapter 10.3 "Published Information" in SWS\_BSWGeneral.

# 11 Not applicable requirements

[SWS\_Port\_00227] [These requirements are not applicable to this specification.] (SRS BSW 00005, SRS BSW 00006, SRS BSW 00007, SRS BSW 00010, SRS BSW 00160, SRS BSW 00161, SRS BSW 00162, SRS BSW 00164, SRS BSW 00167, SRS BSW 00168, SRS\_BSW\_00170, SRS\_BSW\_00172, SRS\_BSW\_00307, SRS\_BSW\_00308, SRS\_BSW\_00309, SRS BSW 00321, SRS BSW 00325, SRS BSW 00328, SRS BSW 00330, SRS BSW 00331, SRS BSW 00333, SRS BSW 00334, SRS BSW 00335, SRS BSW 00336, SRS BSW 00341, SRS BSW 00342, SRS BSW 00343, SRS BSW 00344, SRS BSW 00347, SRS BSW 00357, SRS BSW 00359, SRS BSW 00360, SRS SPAL 12463, SRS SPAL 12462, SRS SPAL 12265, SRS SPAL 12092, SRS SPAL 12078, SRS SPAL 12077, SRS SPAL 12067, SRS SPAL 12064, SRS\_SPAL\_12129, SRS\_SPAL\_12075, SRS\_SPAL\_12063, SRS\_SPAL\_12169, SRS\_SPAL\_00157, SRS SPAL 12069, SRS SPAL 12068, SRS SPAL 12267, SRS SPAL 12056, SRS BSW 00440, SRS\_BSW\_00439, SRS\_BSW\_00437, SRS\_BSW\_00433, SRS\_BSW\_00432, SRS\_BSW\_00429, SRS\_BSW\_00428, SRS\_BSW\_00427, SRS\_BSW\_00426, SRS\_BSW\_00425, SRS\_BSW\_00424, SRS\_BSW\_00423, SRS\_BSW\_00419, SRS\_BSW\_00417, SRS\_BSW\_00416, SRS\_BSW\_00413, SRS\_BSW\_00398, SRS\_BSW\_00395, SRS\_BSW\_00378, SRS\_BSW\_00377, SRS\_BSW\_00375, SRS\_BSW\_00373, SRS\_BSW\_00371)
